

DC Discovery and Migration

AJC offers a wealth of experience in supporting clients through change. During the lifecycle of a Data Centre, one of those changes will be a move or migration, which at outset can sound simple, however only those that have tried, truly appreciate the challenges it brings!

Here at AJC, we have helped several clients plan and execute such moves from; business case creation to supporting financial justification, through to the creation of an end-to-end migration factory. Combining all the above, AJC Consulting offers:

Business Case Generation – Supporting the plan to move or change DC, including migration to the cloud, hybrid cloud, physical lift and shift, or combinations of.

Migration Planning – Working with the data collected from Discovery and Mapping, we help clients create a strategic migration plan to include: time frames, resources, costs, governance and reporting.

Discovery and Audit – Working with clients to understand their current infrastructure and the available options in terms of how the data moves, creating a platform for mapping and planning the execution.

Migration Execution – It's essential to maintain clear reporting at such a critical stage. Working with the client's available resources, our highly skilled teams have successfully delivered many projects through the execution phase ensuring comprehensive stakeholder engagement.

Dependency Mapping – As part of the discovery we work with clients to ensure the services are mapped to the correct underlying infrastructure, leading to the creation of logical and physical move groups.

Data Centre Exit – Managing the processes, people and logistics to ensure that relevant expired assets are appropriately retired, certificated and reported including the secure shredding of media and asset recycling.
