

Configuration & Installation

The AJC Imaging Lab was designed with scalability in mind. With the ability to image 350 units (desktop/laptop/tablet) in unison, Quality Assurance checked units can be delivered across the UK on a next day service. Secure private stock holding areas are available to provide an additional layer of security. Our in-house deployment servers can push images to each node of our network, allowing simultaneous deployment of images to desktop and laptop. This can quickly be changed to accommodate bespoke customer builds, such as Microsoft Deployment Toolkit (MDT) servers or System Centre Configuration Manager (SCCM) servers.

CONFIGURATION & BUILD -

The imaging lab enables our customers to configure and build their desktop and servers with 24/7 connectivity utilising SCCM and MDT. Our image technicians work with the customers or image consultants to design and scope the build and network requirements. Our engineers configure your servers and desktops in-line with your requirements and specific build templates. Each device processed has a second QA check to ensure all builds are tested and verified by an independent QA engineer. We provide customers with unparalleled levels of expertise, knowledge and comfort that they are dealing with an organisation that has successfully rolled out tens of thousands of devices to many customers.

BONDED STOCK -

AJC have over 60,000 sqft of secure bonded warehouse allowing customers to store their equipment. This can then be deployed in line with the project requirements. With over 900 bay locations we can provide next day shipping services across EMEA.

INSTALLATION -

In line with our build, configuration and logistics capability, AJC provide onsite installation capability thus delivering an end to end solution. Furthermore, AJC can remove the old equipment and transport it directly to our secure IT recycling facility for secure processing and data sanitisation recognising any residual value.
